

SERVING AUSTRALIAN AEROSPACE INDUSTRY WITH METROLOGY INNOVATION

Quality Inspection

We supply state of the art metrology technology allowing you to collect precise & reliable data in digital formats.

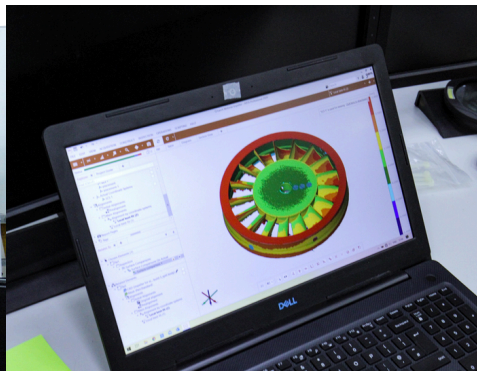

Manufacturing Efficiency

We help you integrate optical metrology & automation solutions into your processes to help you save money & time.

Metrology Services

We provide quality inspection, measurement, motion tracking & reverse engineering services on a project basis.

Success Stories

ATOS OPTICAL METROLOGY SYSTEMS - GREAT FOR AEROSPACE!

Amiga Engineering (VIC), AW Bell (VIC) & Zenith Tecnica (NZ) have all purchased ATOS Q 3D scanning systems for use in quality control & engineering design applications. These systems offer aerospace-level precision as well as great efficiency & flexibility.

AEROSPACE QUALITY INSPECTION & 3D SCANNING SERVICES

Scan-Xpress has completed numerous aerospace 3D scanning, quality inspection & reverse engineering service contracts for companies such as **BAE Systems, Boeing, Pratt & Whitney & Christchurch Engine Centre**. Our Team is well versed with industry manufacturing & engineering requirements.

Products & Services

ZEISS Optical Metrology

German built optical sensors help users to cut down inspection times whilst improving product quality.

ZEISS Industrial Metrology

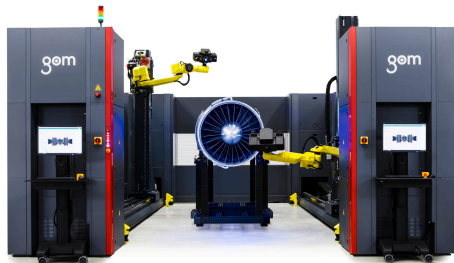

Best-in-class range of CMMs, optical & CT metrology help users to meet the most precise of tolerances.

Handheld Measurement Systems

Perform quality checks or reverse engineer assemblies & components on the fly.

Applications

Manufacturing Quality Control

Measure components & assemblies in-line with precision; check tolerances, reduce defect rates & lower quality cost.

- Benefit from ZEISS dedicated aerospace industry solutions;
- Integrate precise, automated & efficient systems for 3D part inspection;
- Set-up instantaneous pass/fail gates & automated inspection reports.

Maintenance & Repair Application Optimisation

Save time & money performing maintenance service work with optical/ tactile metrology & shop-floor capable solutions.

- Inspect turbine parts, aircraft exteriors & more with precision & speed;
- Use precise digital surface mapping techniques for surface defect analysis;
- Digitise, track & analyse your work & provide detailed quality reports.

Supplier Incoming Goods & Final Quality Control

Ensure your supplier quality & final product standards are met using mobile metrology tools that are easy to use in any environment.

- Inspect incoming goods, compare to CAD & perform visual checks;
- Perform final assembly quality checks using mobile digital tools;
- Digitise, track & analyse your results & supplier performance.
